Week 2 — Superstore Sales Data Analysis

Submitted By: Saksham Sharma

Dataset: Sample - Superstore.csv

Scenario & Objective

As a Data Analyst intern at Celebal Technologies, the task is to analyze the Superstore sales dataset using SQL. The dataset contains 4 years of order data (2014–2017) from an American retail superstore covering Furniture, Office Supplies, and Technology products across 4 regions of the United States.

Objective:

- Load the dataset into a SQL database
- Explore the table schema and sample data
- Apply WHERE filters on region, category, date, and sales
- Use GROUP BY for aggregations - sales, quantity, and averages
- Sort and limit results to find top products and top categories
- Solve use cases - monthly trends, top customers, and duplicate/multi-item orders
- Validate results - row counts and data quality checks

Dataset Schema

Brief Business Insights — Superstore Sales (2014–2017)

1. Revenue & Scale

- Total revenue: \$2,297,200 across 9,994 rows and 5,009 unique orders over 4 years.
- Average sale per transaction: \$229.86. Highest single transaction: \$22,638 (Cisco TelePresence).

2. Regional Performance

- West region leads in total sales (\$725K); South has highest average sale value per item (\$241.80).
- Central region is the weakest in both total sales and volume but the most balanced across categories.

3. Category Performance

- Technology: top in sales (\$836K) and profit (\$145K) with the lowest avg discount (13.2%).
- Furniture: 2nd highest in sales (\$742K) but barely profitable (\$18K) — 17.4% avg discount erodes margins.
- Office Supplies: solid profit (\$122K) on \$719K in sales — most efficient profit margin per sale dollar.

4. Loss-Making Areas — Critical Finding

- Tables sub-category runs at a net loss of -\$17,725 despite \$207K in sales.
- Bookcases (-\$3,472) and Supplies (-\$1,189) are also net loss sub-categories.
- Root cause: discounts above 30-40% consistently produce negative profit across all categories.

5. Seasonal Trends

- September, November, December peak every single year — clear holiday season pattern.
- November 2017 was the single best month: \$118,447 in sales across 261 orders.
- January and February are consistently the slowest months — good time for promotions.

6. Top Performers

- Top customer: Sean Miller (Home Office, South) — \$25,043 in just 5 orders.
- Top product by both sales AND profit: Canon imageCLASS 2200 Copier (\$61,600 sales / \$25,200 profit).
- Worst product: Cubify CubeX 3D Printer loses -\$8,880 — both models combined -\$12,720.

7. Key Recommendation

- Reduce or cap discounts at 20-25% — every order above 30% discount results in a loss.
- Focus on Technology sub-categories (Copiers, Accessories) — highest profit margin.
- Review or discontinue Tables, Bookcases, 3D Printers — all losing money consistently.
